Make public

Make public

The make public action enables public read access in the object access control list (ACL) settings.

⚠

When public read access is enabled and not blocked by Block Public Access settings, anyone in the world can access the specified objects.

This action applies to all objects within the specified folders. Objects added to these folders while the action is in progress might be affected.

A security group acts as a virtual firewall for your instance to control inbound and outbound traffic. To create a new security group, complete the fields below

vpc-0e368e9e7a9637ab3

Assigned by AWS

Security groups [Info](#)

A security group is a set of firewall rules that control the traffic to your load balancer. Select an existing security group, or you can [create a new security group](#).

Security groups

Select up to 5 security groups

aplb-sg

sg-03fc87ca2eab9af38 VPC: vpc-0e368e9e7a9637ab3

Listeners and routing [Info](#)

Target group name

app-tg

A maximum of 32 alphanumeric characters including hyphens are allowed, but the name must not begin or end with a hyphen.

Protocol : Port

Choose a protocol for your target group that corresponds to the Load Balancer type that will route traffic to it. Some protocols now include anomaly detection for the targets and you can set mitigation options once your target group is created. This choice cannot be changed after creation

HTTP

80

1-65535

IP address type

Only targets with the indicated IP address type can be registered to this target group.

☒ IPv4

Each instance has a default network interface (eth0) that is assigned the primary private IPv4 address. The instance's primary private IPv4 address is the one that will be applied to the target.

☐ IPv6

Each instance you register must have an assigned primary IPv6 address. This is configured on the instance's default network interface (eth0). [Learn more](#)

VPC

Select the VPC with the instances that you want to include in the target group. Only VPCs that support the IP address type selected above are available in this list.

Review targets

► Distribution of targets by Availability Zone (AZ)

Listeners and routing [Info](#)

A listener is a process that checks for connection requests using the port and protocol you configure. The rules that you define for a listener determine how the load balancer routes requests to its registered targets.

Target type: Instance, IPv4

HTTP ✓

Listener tags - optional

Consider adding tags to your listener. Tags enable you to categorize your AWS resources so you can more easily manage them.

Add listener tag

You can add up to 50 more tags.

 **Successfully created load balancer: app-lb**

It might take a few minutes for your load balancer to fully set up and route traffic. Targets will also take a few minutes to complete the registration process and pass initial health checks.
